                                                                                                                                                                                                                                                                                                                                                                                                                                             -!- SUBUNIT: HOMODIMER (BY SIMILARITY).
-!- SUBCELULAR LOCATION: MEMBRANE-ASSOCIATED. MICROSOMAL MEMBRANE.
-!- THIS ENZYME ACTS BOTH AS A DIOXYGENASE AND AS A PEROXIDASE.
-!- THIS ENZYME IS THE TARGET OF NONSTEROIDAL ANTI-INFLAMMATORY DRUGS SUCH AS ASPIRIN.
SEQUENCE FROM N.A.
STRAINFISHER 344; TISSUE=TRACHEA;
MEDLINE, 95168876.
KITZLER J., HILL E., HARDMAN R., REDDY N., PHILPOT R., ELING T.E.;
"Analysis and quantitation of splicing variants of the TPA-inducible PGHS-I mRNA in rat tracheal epithelial cells.";
ARCH. BIOCHEM. BIOPHYS. 316.856-863(1995).
-!- FUNCTION: MAY PLAY AN IMPORTANT ROLE IN REGULATING OR PROMOTING CELL PROLIFERATION IN SOME NORMAL AND NEOPLASTICALLY TRANSFORMED
                                                                                                                                                                                                                                                                                                                   -! - CATALYTIC ACTIVITY: ARACHIDONATE + AH(2) + 2, O(2) = PROSTAGLANDIN

Biochem. J. (1978) 173:863-868
Amino acid sequence of the N-terminal 108 amino acid residues of the B chain of subcomponent C1q of the first component of human complement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The first component of complement is a calcium-dependent complex of the three subcomponents Clq, Clr, and Cls. Subcomponent Clq binds to immunoglobulin complexes, with resulting serial activation of Clr (enzyme), Cls (proenzyme), and the other eight components of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  #Ecross-references GDB:119043; OMIM:120570

KLEENE K.C., SMITH J., BOZORGZADEH A., HARRIS M., HAHN L.,
KARIMDOUR I., GERSIEL J.;

Sequence and developmental expression of the mRNA encoding the
seleno-protein of the sperm mitochondrial capsule in the mouse.";

DEV. BIOL. 137:395-402(1990).

-!- FUNCTION: STRUCTURAL PROTEIN OF THE SPERM MITOCHONDRIAL CAPSULE.

IMPORTANT FOR THE MAINTENANCE AND STABILIZATION OF THE CRESCENT
STRUCTURE OF THE SPERM MITOCHONDRIAL.

-!- SUBCELLULAR LOCATION: KERATINOUS MITOCHONDRIAL CAPSULE.

-!- TISSUE SPECIFICITY: TESTIS.

-!- DEVELOPMENTAL STAGE: LATE MEIOTIC AND BARLY HAPLOID CELLS.
                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

cDNA from rat cells with reconstitutive galactose-epimerase activity in E. coli.
An immunoglobulin heterotetramer subunit consists of two identical light (kappa or lambda) and two identical heavy (alipha, delta, epsilon, gamma, or mu) chains usually stabilized by interchain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into larger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       B.; Starzinski-Powitz,

Mean 21.693; Variance 81.714; scale 0.265

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 40, Application US/08469660
Patent No. 5876973
GBNERAL INFORMATION:
APPLICANT: GWYDNE, David I.; Marchionni, Mark;
APPLICANT: McBurney, Robert N.
TITLE OF INVENTION: INHIBITORS OF CELL PROLIFERATION,
TITLE OF INVENTION: THEIR PREPARATION AND USE
NUMBER OF SEQUENCES: 184
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 39;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STATE: Massachusetts
TIP: 0211-2804
COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette, 5.25 inch, 360 kb storage
COMPUTER: IBM

antibodies, antagonists, etc.

Claim 5; Fig 5; 35pp; English.

The HFGAN72 receptor protein contains two ligans whose antagonists can be used for treating obesity, diabetes, anorexia nervosa, bulimia, cachexia, chronic renal failure, renal disease, congestive heart failure, impaired glucose tolerance and sexual dysfunction. The agonist is useful for treating anorexia nervosa, bulimia and cachexia. The HFGAN2 receptor ligand is useful for treating e.g. bacterial, fungal, protozoan and viral nifections, particularly infections caused by HIV-1 or HIV-2, pain, cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthma, Parkinson's disease, both acute and congestive heart failure,

hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, ulcers, asthma, allergies, benign

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    be used for treating obesity, diabetes, anorexia nervosa, bulinia, cachexia, chronic renal failure, renal disease, congestive heart failure, cachexia, chronic renal failure, renal disease, congestive heart failure, impaired glucose tolerance and sexual dysfunction. The agonist is useful for treating anorexia nervosa, bulimia and cachexia. The HFGAN72 receptor ligand is useful for treating e.g. bacterial, fungal, protozoan and viral infections, particularly infections caused by HIV-1 or HIV-2, pain, cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthma, Parkinson's disease, both acute and congestive heart failure, hypotension, hypotension, urinary retention, osteoporosis, angina prostatic hypertrophy, chronic renal failure, renal disease, impaired glucose tolerance, sexual dysfunction and psychotic and neurological disorders including anxiety, schizophrenia, manic depression, delirium, dementia, severe mental retardation and dyskinesias such as Huntington's disease or gilles dela Tourett's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human HFGAN72 (zeceptor protein. HFGAN72 receptor; eating disorders; renal disease; heart failure; HFGAN72 receptor; eating disorders; renal disease; heart failure; excual dysfunction; HIV; cancer; Parkinson's disease; urinary retention; osteoporosis; angina pectoris; myocardial infarction; psychotic disorder; neurological disorder.

Transgenic knock-out mice containing new Ich-3 disrupted generates yes an experient to a screening for compounds to treat septic shock and defects in folliculogenesis.

Transgenic knock-out mice compounds to treat septic shock and defects in folliculogenesis.

Example 1, Page 67.4-67.5; 99pp; English.

The present invention describes: (1) a method for modulating programmed cell death in a cell, comprising contacting the cell with modulating amounts of ICH-3; (2) a method for promoting pro-interleukin (pro-IL) (ICE), comprising contacting the cell with ICH-3 expressed under the control of a CMV promoter; (3) a method for stimulating synthesis of Ich-3 gene products in a cell, comprising contacting the cell with contacting the cell with contacting the cell with stimulatory amounts of lipopolysaccharide (ICE); (GES); (4) a monoclonal or polyclonal antibody that specifically binds to ICH-3; (5) a transgenic non-human animal, comprising a disrupted ICH-3 gene, and its progeny,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This protein is a porcine complement inhibitor encoded by pMCPcDNA (T61098). The DNA is useful for large scale production of recombinant porcine complement inhibitor, which is useful for porcine organ transplantation into humans. The DNA clone pWCPcDNA is also useful in the analysis of the promoter region of porcine complement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ICH-3; mouse; programmed cell death; septic shock; folliculogenesis; interleukin converting enzyme; ICE; cysteine protease; cytokine; maturation; apoptosis; sepsis; burn; trauma; immunogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding porcine complement inhibitor - useful in porcine organ
                                                                W12414;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a novel mammalian lysophosphatidic acid acyltransferase (LPAAT) enzyme, designated LPAAT I. Enzymes LPAAT I. LPAAT II. ac human homologues of non mammalian forms of LPAAT. The sequences can be used to screen for LPAAT inhibitors and to study the role of LPAAT enzymes in signal transduction and disease. note: the present sequence does not appear in the specification; it was sequence 339 AA;

matrix. The protein is produced by expression of the recombinant DNA in a host cell and comprises more than one polypeptide chain, with an amino acid sequence sufficiently duplicative of COP5, COP7, COP16 or OP1. The protein and the implantable devices enable optimal predictable bone formation. Clinical applications include correction of acquired and congenital craniofacial and other skeletal or dental anomalies, induction of local endochondral bone formation in non-union fractures, peridontal applicant of osteoarthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA encoding human uridine diphosphate galactose-4-epimerase - used in the treatment and diagnosis of galactosaemia claim 1: Page 43-44. 59pp; English.

Claim 1: Page 43-44. 59pp; English.

Claim 1: Page 43-44. 59pp; English.

(W01619) catalyses a reversible reaction between UDP-glucose and UDP-gladactose that allows galactose residues to enter into the main UDP-glucose that allows galactose residues to enter into the main pathways of glucose metabolism. A deficiency of the enzyme results in galactosaemia. The amino acid sequence of UDP-G4E was deduced from a cDNA clone (T58301) derived from a human endometrial tumour library. Recombinant UDP-G4E polypeptides can be produced in transformed host (e.g. E. coli, COS, Sf9 insect) cells or expressed in vivo for use in the treatment of UDP-G4E deficiency, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

antagonists, in therapy, to detect Ab and to isolate cognate receptors. Oligonuclectides based on H35 cDNA can be used to detect the hypocretin gene or its RNA transcript, and as antisense agents for inhibiting gene expression. H35 cDNA can also be used for recombinant protein production. The Ab can be used to detect or quantify hypocretin proteins and as a therapeutic inhibitor.

Indiguous, the sequences given in W21731-32 represent fusion proteins which contain. The sequences given in W21731-32 represent fusion proteins which contain. NuMA (nuclear mitoric apparatus). The fusion proteins were used in the identification of NuMA interecting proteins (NIP's) (see also W21729-30). Compounds which interfere with the interaction of NuMA with a known NIP are used to modulate cell division and/or proliferation. Ab, raised conventionally using NIP-1 or -2 as immunogen, are used to detect NIP (or their complexes) and to block their activity for diagnostic or therapeutic use, e.g. to detect defective NuMA or NIP which may be markers for aberrant (including malignant) cell growth (which can also be detected by nucleic acid sequencing). Also where malignancy is related to defects in NuMA or NIP, it can be treated by administration of the appropriate functional protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 82222228
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ŏ
Disclosure; Fig 7; 138pp; French.

The invention relates to the production of mammalian collagen type I gene carbon alpha22, spanning the human collagen type I gene were isolated from a MG-63 osteosarcoma library. Clone alpha3 contained 83 bp of the 5 untranslated region and the first 1920 bp of coding 83 bp of the 5 untranslated region and the first 1920 bp of coding 171-1454 of the protein and around 500 bp of the 3' untranslated region. The 2 clones were used to generate a number of fragments which were used to construct composite sequences encoding variant collagen molecules. The fragments are: (A) containing nucleotides (nt) -4 to 479;

CC The fragments are: (A) containing nucleotides (nt) -4 to 479;

CC The fragments are: (A) containing nucleotides (nt) -4 to 479;

CC The fragments are: (B) containing nucleotides (nt) -4 to 479;

CC (pathogenesis related protein S) signal peptide and bases 66-77 from the sequence encoding the N-terminus of the pro-collagen amino propeptide domain; (C) the whole of the amino propeptide domain (nt 72-479); (D) all of the whole of the amino propeptide domain (nt 535-1920); (E) the DraIII-BamHI fragment (1709-2808) of alpha22, encoding as 567-936 of the central helicoidal domain; (F) the BamHI-ECARI (2803-4562) region of alpha22, encoding as 396-1192 in the central helicoidal domain and as 1193-144 in the C-propeptide domain; (G) the C-terminus of the C-propeptide domain; (G) 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            as prostheses for cardiac valves, ligaments or tendons; skin substitutes; gingival implants; microcapsules for perfumes; guide tubes for nerve regeneration; slow release products for antibiotics, growth factors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 anticancer agents or anti-inflammatories; surgical thread and components of ointments). They are suitable for treating any disorder related to collagen dysfunction and gelatin, produced from collagen, is used to produce glues, surgical prostheses and foods.

Disclosure; Fig 2; 69pp; English.

ProTNE refers to TNE having a molecular weight of about 26,000,
which is the prohormone form of TNFa. ProTNE is cleaved to a lower
molecular weight mature' form, pref. 17kb, which, in its multimeric
(usually trimeric) form, is substantially involved in producing life-
threatening physiological changes associated with sepsis. ProTNF is
cleaved by convertase. One TNF convertase is serine protease
proteinase-3, also called PR-3, P-29B or myeloblasin. A suitable
source of convertase is the HL60 cell line (or extracts, or the
culture media in which it is grown). The convertase produced by
HL60 has been sequenced and is identical to the known lymphocyte
serine protease PR-3 which has other activities unrelated to TNF
                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cpds. which inhibit formation of mature tumour necrosis factor from its precursor - identified using TNF convertase, e.g. mutein(s), antibodies or peptide phosphonate(s), for preventing and treating sepsis, AIDS, auto-immune disease etc.
Claim 2; Columns 43-60; 68pp; English.#
The present sequence is a protein (OA-519) cross-reactive with the haptoglobin related (hpr) gene product. OA-519 can be used raise antibodies reactive with epitopes found on the hpr gene product, but not on haptoglobin 1 or 2, useful in cancer, especially breast cancer, prognosis assays.
                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0;

Patent No. 5437863
GENERAL INFORMATION:
APPLICANT: Williams, David A.
APPLICANT: Clark, Steven C.
TITLE OF INVENTION: Method of Treating Cell Damage or TITLE OF INVENTION: Depletion
NUMBER OF SEQUENCES: 4
                                                                                                                                                   Score 60; DB 1; Length 199;

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 31.574; Variance 48.443; scale 0.652

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                     IT BINDS TO THE E2RE RESPONSE ELEMENT (5'-ACCNNNNNGGT-3') PRESENT IN MULTIPLE COPIES IN THE REGULATORY REGION. IT CAN EITHER ACTIVATE OR REPRESS TRANSCRIPTION DEPENDING OF E2RE'S POSITION WITH REGARDS TO PROXIMAL PROMOTER ELEMENTS. REPRESSION OCCURS BY STERICALLY HINDERING THE ASSEMBLY OF THE TRANSCRIPTION INITIATION COMPLEX. THE E1-E2 COMPLEX BINDS TO THE ORIGIN OF DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SEQUENCE FROM N.A.

HFGAN72 receptor ligands - and corresponding DNA, agonists

antibodies, antagonists, etc.

Claim 5: Fig 5: 35pp; English.

The HFGANT2 receptor protein contains two ligans whose antagonists can be used for treating obesity, diabetes, anorexia nervosa, bulimia, cachexia, chronic renal failure, renal disease, congestive heart failure, impaired glucose tolerance and sexual dysfunction. The agonist is useful for treating anorexia nervosa, bulimia and cachexia. The HFGANZ receptor ligand is useful for treating e.g. bacterial, fungal, protozoan and viral infections, particularly infections caused by HIV-1 or HIV-2, pain, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthma, Parkinson's disease, both acute and congestive heart failure, hypotension, hypertension, urieary retention, osteoporosis, angina pectoris, myocardial infarction, ulcers, asthma, allergies, benign

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HrGAN72 receptor ligands - and corresponding DNA, agonists,
antibodies, antagonists, etc.
Claim 2: Fig 2: 35pp; English.

The HrGAN72 receptor protein contains two ligands whose antagonists can be used for treating obesity, diabetes, anorexia nervosa, bulimia, cachexia, chronic renal failure, renal disease, congestive heart failure, impaired glucose tolerance and sexual dysfunction. The agonist is useful for treating anorexia nervosa, bulimia and cachexia. The HrGAN72 receptor ligand is useful for treating e.g. bacterial, fungal, protozoan and viral infections, particularly infections caused by HIV-1, or HIV-2, pain, cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthma, parkinson's disease, both acute and congestive heart failure, hypotension, hypotension, uninary retention, osteoporosis, angina pectoris, myocardial infarction, ulcers, asthma, allergies, benign prostatic hypertrophy, chronic renal failure, renal disease, impaired clisoners tolerance, sexual dysfunction and psychotic and neurological disorders including anxiety, schizophrenia manic depression, delirium, dementia, severe mental retardation and dyskinesias such as Huntington's constants.
                                                                                                                                                                                                                                                                                                                               Human HFGAN7 receptor protein.

antagonists, in therapy, to detect Ab and to isolate cognate receptors. Oligonucleotides based on H35 cDNA can be used to detect
                             the hypocretin gene or its RNA transcript, and as antisense agents for inhibiting gene expression. H35 cDNA can also be used for recombinant protein production. The Ab can be used to detect or quantify hypocretin proteins and as a therapeutic inhibitor. Sequence 130 AA;
                                                                                                                                                           ;

The sequences given in W21731-32 represent fusion proteins which contain The sequences given in W21731-32 represent fusion proteins which contain NuMA (nuclear mitoria apparatus). The fusion proteins were used in the identification of NuMA interecting proteins (NIP's) (see also W21729-30). Compounds which interfere with the interaction of NuMA with a known NIP are used to modulate cell division and/or proliferation. Ab, raised conventionally using NIP-1 or -2 as immunogen, are used to detect NIP (or their complexes) and to block their activity for diagnostic or therapeutic use, e.g. to detect defective NuMA or NIP which may be markers for aberrant (including malignant) cell growth (which can also be detected by nucleic acid sequencing). Also where malignancy is related to defects in NuMA or NIP, it can be treated by administration of the appropriate functional protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NIP-1; NIP-2; NUMA; nuclear mitotic apparatus; NUMA interacting protein; cell division; proliferation; antibody; Ab; detection; malignant cell growth.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ID DAC DE DE CENTRA KENTRA KEN
                                                                                                                                                                                                                                                                                 Constructed from a long and the ITST 128.0 bp of cocding sequence, whereas clone alpha22 contained sequence encoding amino acids 171-1454 of the protein and around 500 bp of the 3' untranslated region. The 2 clones were used to generate a number of fragments which were used to construct composite sequences encoding variant collagen molecules. The fragments are: (A) containing TAA upstream of the sequence encoding the PRS (Dathogenesis-related protein S) signal peptide and bases 66-77 from the sequence encoding the N-terminus of the pro-collagen amino propeptide domain. (C) the whole of the amino propeptide domain (nt 72-479); (D) all of the amino-telopeptide domain (nt 474-534) and the N-terminus of the elicoidal region (nt 535-1920); (B) the DraIII-BamHI fragment (1709-2808) of alpha22, encoding as 567-936 of the central helicoidal comain. (F) the BamHI-EcoRI (2803-4362) region of alpha22, encoding as 936-1192 in the central helicoidal domain and as 1193-1461 and also including the KDEL motif for retention in the ER. This sequence constructed from fragments (A), (D), (E), (F) and (G). The recombinant constructed from fragments (A), (D), (E), (F) and (G). The recombinant constructed from fragments (A), (D), (E), (F) and (G). The recombinant constructed from fragments (A), (D), (E), (F) and (G). The recombinant constructed from fragments (A), (D), (E), (F) and (G). The recombinant constructed from fragments (A), (D), (E), (F) and (G). The recombinant constructed from fragments (A), (D), (E), (F) and (G). The recombinant constructed from fragments (A), (D), (E), (F) and (G). The recombinant constructed from fragments (A), (D), (E), (F) and (G). The recombinant constructed from fragments (C) as prostheses for extracts and parts are useful as biomaterials (C) as prostheses for cardiac valves, ligaments or tendons; skin substitutes; approaches the encoding and parts (C) and (G) as prostheses for cardiac valves, ligaments or tendons; skin substitutes; approaches and parts (C) and (G) and parts (C) and (G) and parts (
Disclosure; Fig 7; 138pp; French. The invention of mammalian collagen in plants. The invention relates to the production of mammalian collagen in plants. 2 clones: alpha3 and alpha22, spanning the human collagen type I gene were isolated from a MG-63 osteosarcoma library. Clone alpha3 contained 83 bp of the 5' untranslated region and the first 1920 bp of coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         anticancer agents or anti-inflammatories; surgical thread and components
